No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1992 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

Contents of Volume 98

Number 1, January 1992

- 1 **Vertex-Centered and Cell-Centered Multigrid for Interface Problems**
M. Khalil and P. Wesseling
- 11 **Evolution of Scalar Fields from Characteristic Data**
R. Gómez, J. Winicour, and R. Isaacson
- 26 **Enclosures of the Solution of the Thomas–Fermi Equation by Monotone Discretization**
C. Grossmann
- 33 **An Interactive Approach for Calculating Ship Boundary Layers and Wakes for Nonzero Froude Number**
Y. Tahara, F. Stern, and B. Rosen
- 54 **Adaptive Local Overlapping Grid Methods for Parabolic Systems in Two Space Dimensions**
Peter K. Moore and Joseph E. Flaherty
- 64 **Triangle Based Adaptive Stencils for the Solution of Hyperbolic Conservation Laws**
Louis J. Durlofsky, Bjorn Engquist, and Stanley Osher
- 74 **A Comparison of Optimization-Based Approaches for a Model Computational Aerodynamics Design Problem**
Paul D. Frank and Gregory R. Shubin
- 90 **A Formula for Estimation of Truncation Errors of Convection Terms in a Curvilinear Coordinate System**
D. Lee and Y. M. Tsuei
- 101 **A Numerical Technique for Obtaining the Complete Bifurcated Equilibrium Solution Space for a Tokamak**
F. J. Helton and J. M. Greene
- 108 **A Consistently Formulated QUICK Scheme for Fast and Stable Convergence Using Finite-Volume Iterative Calculation Procedures**
T. Hayase, J. A. C. Humphrey, and R. Greif
- 119 **The Method of Fundamental Solutions for the Solution of Steady-State Free Boundary Problems**
Andreas Karageorghis
- 129 **Numerical Treatment of Grid Interfaces for Viscous Flows**
Yannis Kallinderis
- 145 **A Computational Model of the Cochlea Using the Immersed Boundary Method**
Richard P. Beyer, Jr.
- 163 **Application of Bubnov–Galerkin Formulation to Orthogonal Grid Generation**
Alejandro Allievi and Sander M. Calisal
- 174 **NOTE**
A Fast Algorithm for Spectral Differentiation
Alex Solomonoff
- 178 **ABSTRACTS OF PAPERS TO APPEAR IN FUTURE ISSUES**

Number 2, February 1992

- 181 **The Arctan/Tan and Kepler–Burgers Mappings for Periodic Solutions with a Shock, Front, or Internal Boundary Layer**
John P. Boyd
- 194 **Locating Three-Dimensional Roots by a Bisection Method**
John M. Greene
- 199 **Numerical Computation of 2D Sommerfeld Integrals—Decomposition of the Angular Integral**
Steven L. Dvorak and Edward F. Kuester

- 217 **Numerical Computation of 2D Sommerfeld Integrals—A Novel Asymptotic Extraction Technique**
Steven L. Dvorak and Edward F. Kuester
- 231 **Crystal Growth and Dendritic Solidification**
James A. Sethian and John Strain
- 254 **Orthogonal Mapping in Two Dimensions**
Ramani Duraiswami and Andrea Prosperetti
- 269 **A Numerical Method for Solving Systems of Linear Ordinary Differential Equations with Rapidly Oscillating Solutions**
Ira B. Bernstein, Leigh Brookshaw, and Peter A. Fox
- 285 **The Asymptotic Diffusion Limit of a Linear Discontinuous Discretization of a Two-Dimensional Linear Transport Equation**
Christoph Börgers, Edward W. Larsen, and Marvin L. Adams
- 301 **Hydrodynamic Modeling of Particle and Angular Momentum Transport in Rotating Tokamak Plasmas with Impurities**
R. Zanino
- 317 **Time-Implicit Fluid Simulation of Collisional Plasmas**
P. W. Rambo and J. Denavit
- 332 **Numerical Analysis of 2D MHD Equilibrium with Non-inductive Plasma Current in Tokamaks**
K. Tani, M. Azumi, and R. S. Devoto
- NOTE**
- 342 **Parameterized Solution of One-Dimensional Thermal Diffusion with a Heat Source and a Moving Boundary**
Edward J. Caramana and Robert B. Webster
- 347 **ABSTRACTS OF PAPERS TO APPEAR IN FUTURE ISSUES**
- 350 **AUTHOR INDEX FOR VOLUME 98**

The purpose of the *Journal of Computational Physics* is to publish articles concerning techniques developed in the solution of data handling problems and mathematical equations, both arising in the description of physical phenomena.

Submission of manuscripts. Manuscripts should be submitted to:

Journal of Computational Physics

Editorial Office
Seventh Floor
1250 Sixth Avenue
San Diego, California 92101
Telephone: (619) 699-6467
Fax: (619) 699-6859

Only original papers will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editors' discretion. Articles and any other material published in the *Journal of Computational Physics* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editors and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Form of manuscript. Manuscripts should be typewritten with wide margins on high quality 8.5 × 11-in. bond paper, using double spacing throughout. If larger paper must be used, the text must still be within these dimensions. A minimum of three copies should be submitted; however, in order to expedite handling of manuscripts, five copies are desirable. The original of the manuscript and figures (including computer-generated data) need not be submitted until acceptance, as long as the copies are clear and reproducible. Figures and tables must be in all copies.

Each page of the manuscript should be numbered consecutively. *Page 1* should contain the article title, author, and coauthor names with complete affiliation(s). At the bottom of this page should appear the subject classifications and key words (see below). *Page 2* should contain a proposed running head of less than 50 characters. It should also contain the name and complete mailing address of the person to whom proofs are to be sent. *Page 3* of full articles should contain a short abstract.

All submitted papers will be scrutinized for length, particularly if they exceed 12 journal pages in length (including graphs, tables, references, etc.) and if the author has published in the Journal within the previous year.

Notes. Short notes of 10 pages or less (including figures, tables, and references but excluding title pages) regarding the availability of interesting and useful new programs or tabular material will be considered for publication. Letters to the Editor commenting on articles already published in this Journal will also be considered. Neither notes nor letters should have an abstract.

With the exceptions noted below, authors should be guided by the *Style Manual*, 1978, of the American Institute of Physics.

Subject classification. Authors are required to classify their own manuscripts using the 1980 *Mathematics Subject Classification*, 1985 revision, reprinted in the 1987 *Mathematical Reviews Index* and/or from the additional classifications listed in the January 1989 issue of *Journal of Computational Physics*. Authors are requested to choose at least two categories—one in numerical analysis category 65, and one other (generally a physical classification) from the categories beyond 65. Also include a few key words.

List of Symbols. If the paper is accepted for publication, it is of vital importance that the author submit a complete list of symbols. The symbols used should be identified for the typesetter **phonetically**. This list will not appear in print but is essential to avoid costly corrections in proof. The author may prepare his or her own list or use a preprinted form supplied by the Editorial Office.

Tables. Number tables consecutively with Roman numerals. Extensive tables will be reproduced photographically and should be typed carefully in the **exact** format desired. Authors will be charged for any new photoreproductions necessitated by changes in proof. Use superscript lowercase *italic* letters for table footnotes, which should be typed immediately below the table. Type tables at least double-spaced, including titles and footnotes. Do not underline table titles; reserve underlining for text that is to be *italicized*.

Equations. Equations should be typewritten whenever possible and the number placed in parentheses at the right margin. Reference to equations should use the form "Eq. (3)" or simply "(3)." Superscripts and subscripts should be typed or handwritten clearly above and below the line, respectively. Use the exponent $^{1/2}$ whenever possible.

References. References should be cited in the text by a number in square brackets. Literature cited should appear on a separate page at the end of the article and should be styled and punctuated according to the standards of the American Physical Society and using standard abbreviations for journals (see *Chemical Abstracts Service Source Index*, 1985). For unpublished lectures or symposia, include title of paper, name of sponsoring society in full, and date. Abbreviation of DOE Laboratory report names should follow the style of *Nuclear Science Abstracts*. Give titles of unpublished reports with "(unpublished)" following the reference. See the following examples:

1. Z. Wang and B. E. Richards, High resolution schemes for steady flow computation, *J. Comput. Phys.* **97**, 53 (1991).
2. I. Gohberg, P. Lancaster, and L. Rodman, *Matrix Polynomials* (Academic Press, New York, 1982), p. 54.
3. R. Gross, M. Koyanagi, H. Seifert, and R. P. Huebener, Article title, in *Proceedings, 17th Int. Conf. on Low Temperature Physics, Karlsruhe, West Germany, 1984*, edited by U. Eckern et al. (North-Holland, Amsterdam, 1984), p. 431.

Footnotes. Footnotes in the text should be avoided if at all possible. If they must be used, identify by superscript numbers and type together on a separate page, double-spaced.

Figures. All illustrations are to be considered as figures. Number each graph or drawing in sequence with Arabic numerals. Supply a descriptive legend for each figure. Type legends double-spaced consecutively on a separate page. All figures should be planned to fit the proportions of the printed page ($7\frac{1}{8} \times 9$ inches). All illustrations should be in finished form suitable for reproduction and no larger than 8.5×11 inches. Lettering on drawings

should be of professional quality or generated by *high-resolution* computer graphics and should be large enough (10–12 points) to take a reduction of 50 to 60 %. Freehand, penciled, or type-written lettering is not acceptable. Drawings should be made with the equivalent of black India ink on tracing linen, smooth-surface white paper, or Bristol board. Alternatively, *high-quality* computer graphics may be acceptable. *Symbols used to identify points within a graph should be large enough that they will be easily distinguishable after reduction.* Plot graphs on blue coordinate or white paper. Grid lines that are to reproduce must be shown in black. All drawings may be submitted as glossy prints. Identify each figure in a margin with the name of the journal, author's name, and figure numbers; avoid marking the backs of figures.

Proofs. Proofs will be sent to the author with a reprint order form. Authors will be charged for alterations in excess of 10 % of the cost of composition.

Reprints. Fifty reprints without covers will be provided free of charge. Additional reprints may be purchased.

Historia Mathematica

Editor

Eberhard Knobloch

Technische Universität Berlin, West Germany

Managing Editor

David E. Rowe

Pace University, Pleasantville, New York

Historia Mathematica is concerned with the history of all aspects of the mathematical sciences in all parts of the world and all historical periods. The journal publishes occasional biographies of mathematicians and historians, studies of organizations and institutions, essays on historiography, and articles on the interactions among all facets of mathematical activity and other aspects of culture and society.

In addition to research articles, **Historia Mathematica** includes the following departments: Notes, News and Notices, Sources, Meetings, Projects, Reviews, Abstracts, and Letters to the Editor.

Published under the Auspices of the International Commission on the History of Mathematics of the Division of the History of Science of the International Union of the History and Philosophy of Science

*An International Journal Designed for the Diverse Community of Users
and Developers of Novel X-Ray Imaging and Analysis Techniques*

Journal of X-Ray Science and Technology

Editor-in-Chief: Larry Knight

Brigham Young University, Provo, Utah

The **Journal of X-Ray Science and Technology** is designed to provide scientists and engineers with a single literature source covering new developments in the field of x-ray imaging and analysis techniques.

Research Areas Include

- Applications: analytical, nondestructive testing, microelectronics, biological/medical imaging, x-ray astronomy, materials and surface science
- Interaction of x rays with matter: x-ray phenomena and optical constants
- Sources: synchrotron-generated x rays, x-ray lasers, laser-produced plasmas, novel solid sources
- Optical elements: grazing incidence optics, multilayer mirrors, zone plates, gratings
- Optical instruments: interferometers, spectrometers, microscopes, telescopes, microprobes
- Detectors: CCD arrays, position-sensitive detectors
- Signal processing: coded imaging, tomography
- Related topics and future trends

Volume 3 (1991), 4 issues ISSN 0895-3996 In the U.S.A. and Canada: \$104.00 All other countries: \$116.00

Manuscripts may be submitted in quadruplicate to:

JOURNAL OF X-RAY SCIENCE AND TECHNOLOGY

Editorial Office

1250 Sixth Avenue, San Diego, CA 92101

*Sample copies and privileged personal rates are available upon request.
